Software Engineer (Full-Stack) | TypeScript, Vue, Next.js, Node.js, PostgreSQL | Replaces manual processes with software

EXPERIENCE

Full-Stack Developer

Jan 2024 – Present

Evans Consoles (control room consoles for NASA, the Pentagon, and 911 centres; 400 staff)

Calgary, AB

- Consolidated a separate reporting app into the core platform, **retiring a parallel React codebase**, and rebuilt **40+ reports** and **15+ dashboards** in **Vue 3** for **300+ staff**.
- Rebuilt the month-end **Vertical Market Report**, cutting it from weeks of manual assembly to **15 seconds**.
- Built the **Project Budget Tracker**, one of the platform's largest modules, replacing a shared Excel workbook that produced version conflicts, lost files, and hours of re-entry with shared editing, audit history, and ERP integration.
- Built the **Bill of Materials costing** app, turning the modeling software's raw Excel export into the revision-tracked BoM the shop floor builds from.
- Replaced manual identity and ERP data sync with a **BullMQ and Redis worker engine**, moving LDAP joiner and leaver provisioning and **MySQL to PostgreSQL replication** onto an unattended daily cron.
- Integrated **Microsoft Entra SSO** over **OIDC** into another team's PHP ProcessMaker fork and **Angular** suite.
- Review pull requests both ways with the senior developers, and wrote the API docs the other Evans teams build on.

Full-Stack Developer

Jul 2025 – Present

iDoTogether (idotogether.com)

Calgary, AB

- Built and operate **iDoTogether**, a wedding planning SaaS on **Next.js**, **Supabase**, and Vercel, live since May 2026 with 400+ users and paying customers, and handle their support and feedback directly.
- Built the guest photo board: guests upload on reception Wi-Fi with browser-side compression and resumable uploads, and a live slideshow runs on **Supabase Realtime**, covered by **Vitest** and rate limited by Vercel WAF.
- Built the **Stripe** billing path with webhook signature verification and two-layer idempotency, so duplicate deliveries are no-ops rather than double charges.

Full-Stack Developer (Contract)

Nov 2024 – Aug 2026

SolveX Digital

Calgary, AB

- Delivered five client sites in **Next.js** on Vercel, scoping each with the client, including a CMS-backed inventory system for an automotive collection.

Technology Consultant (Contract)

May 2023 – Dec 2023

One Piece IT

Calgary, AB

- Automated client server and network provisioning in **Bash** and **PowerShell**, replacing repeated manual setup.

Software Developer Intern

Apr 2022 – Dec 2022

Launchcode

Calgary, AB

- Led a 5-person team under Launchcode's senior developers to ship a quote-to-cash platform in **React** and **Node.js** for an oil and gas customer.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Bash

Frontend: Vue 3, React, Next.js, Angular, Tailwind CSS

Backend & Databases: Node.js, Koa, REST APIs, PostgreSQL, Supabase, Redis, BullMQ, Drizzle ORM, Stripe

DevOps & Tooling: Vitest, Docker, Vercel, GitHub Copilot, Git, Linux

EDUCATION

Southern Alberta Institute of Technology (SAIT)

Diploma in Software Development

Calgary, AB

Sep 2021 – Dec 2022
